

Course: Programming Fundamental - ENSF 480

Lab #: Lab 4

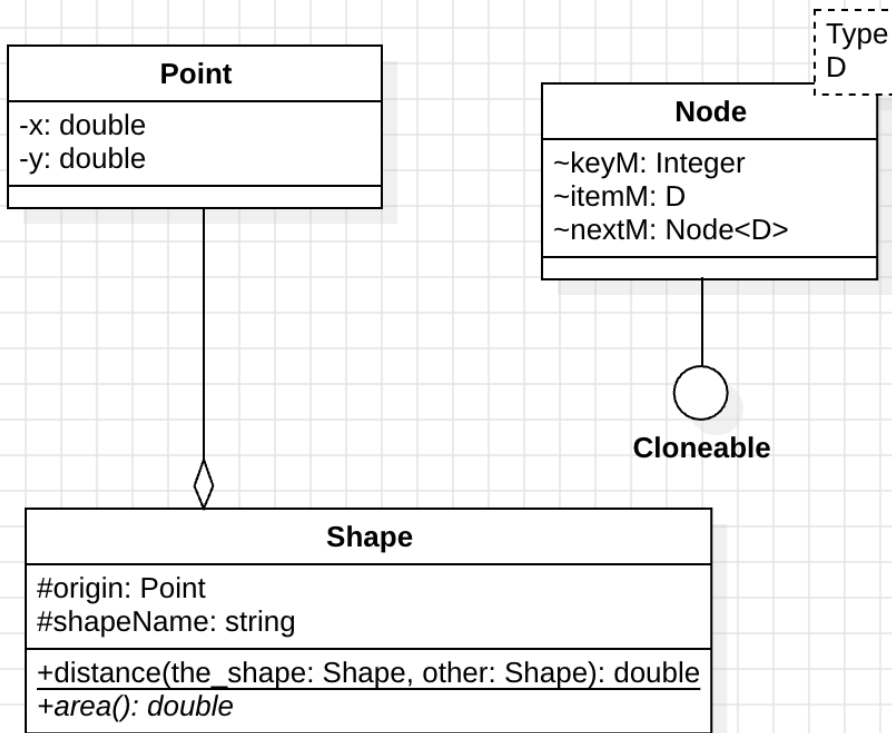

Instructor: G. Gouri

Student Name: Daniel Rey, Aly Farouz

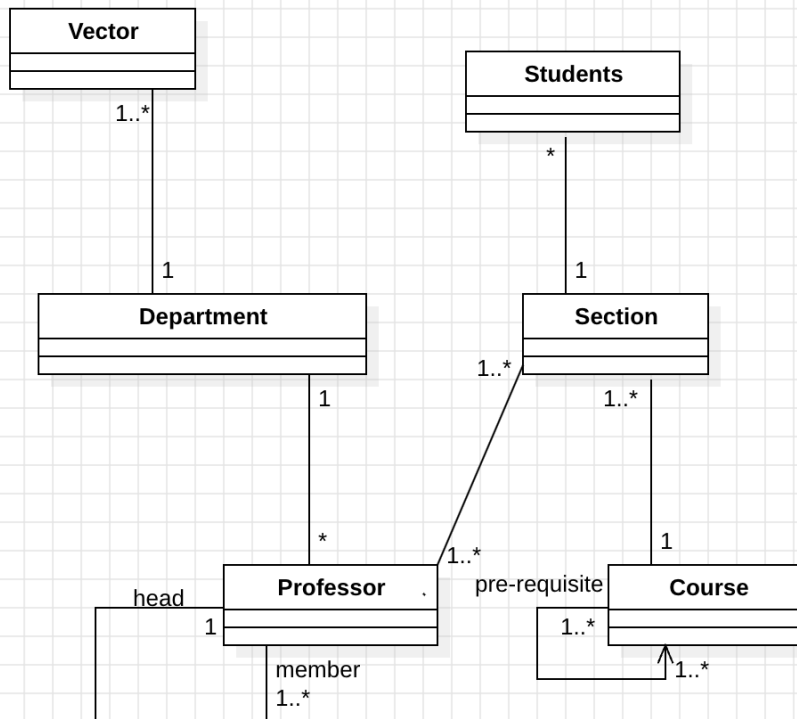

Lab Section: B01

Date Submitted: October 6, 2025

Exercise A

Exercise B

Exercise C

```
#include <string>

class Moveable {
public:
    virtual void forward();
    virtual void backward();
};

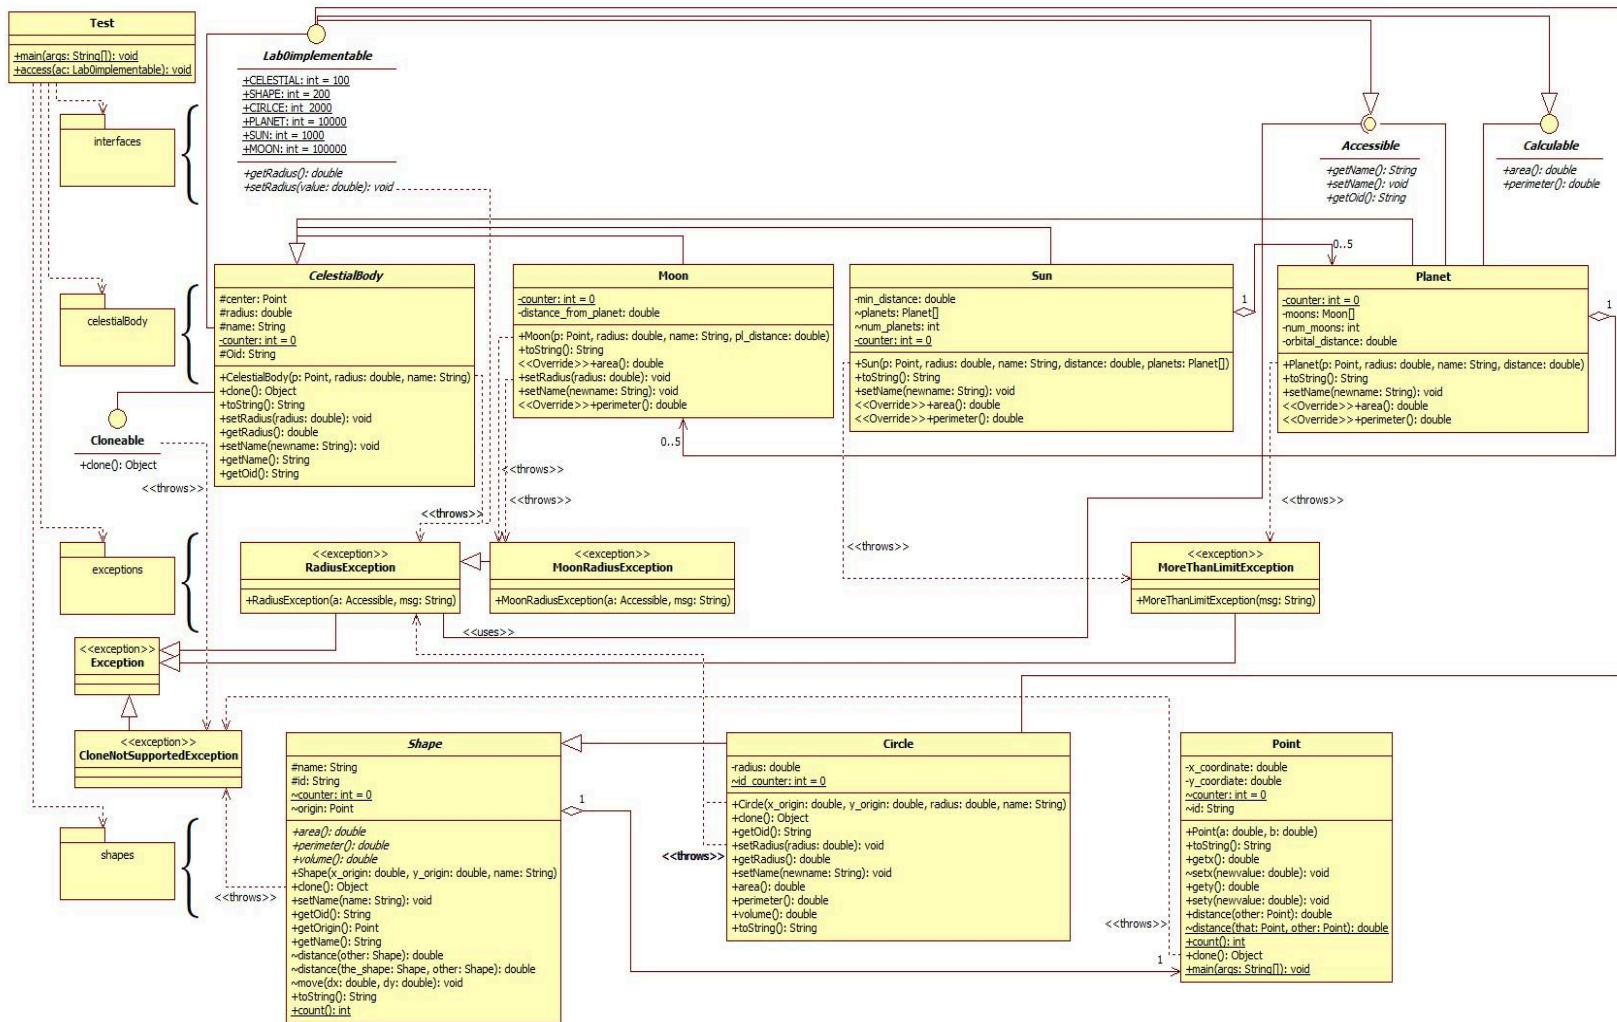

class Resizable {
public:
    virtual void enlarge(int n);
    virtual void shrink(int n);
};

class Car : public Vehicle {
private:
    int seats;
public:
    void turn();
    void move();
};

class Vehicle : public Moveable, public Resizable {
protected:
    std::string name;

public:
    Vehicle(std::string name) {
        name = name;
    }
    virtual void move();
    void enlarge(int n);
    void shrink(int n);
    void forward();
    void backward();
};
```

Exercise D

Note that I did not indicate dependencies of subclasses unless they override the superclass.
